Education

KJ Somaiya College Of Engineering, B.Tech in Computer Engineering Jul 2023 – Aug 2027

- CGPA: 9.87
- **Coursework:** Data Analysis, Probability, Discrete Maths, Statistics,

Skills

Programming Languages: Python, JavaScript, TypeScript

Web & Backend: React.js, Node.js, Express.js, Flask, MongoDB, HTML/CSS, SQL

Tools & Frameworks: Git and GitHub, Pandas, NumPy, Matplotlib, Zoho Creator, Deluge, MS Office

Experience

Zoho Integration Intern, MBM Newtech – Mumbai Jun 2025 – Jul 2025

- Automated internal HR workflows by integrating **Zoho People**, reducing manual work by **80%**, and improving efficiency.
- Collaborated with multiple departments to gather requirements and **create specific automation solutions**
- Designed and built **4** custom applications using **Zoho Creator** to replace Excel-based processes and ease data management.
- Created clear and structured SOPs to support smooth adoption and onboarding.

IXD Intern, The Minimalist – Mumbai Dec 2024 – Jan 2025

- Converted Figma design into responsive web pages using HTML, CSS, and JavaScript.
- Developed e-mailers for client marketing campaigns, incorporating feedback from senior designers.
- Worked with the design team to ensure consistency between UI designs and final implementations.

Projects

RelicQuest | *Collectibles Auction Platform*

- **Tech Stack:** React, Node.js, PostgreSQL, Supabase
- Developed a responsive front-end using React to manage dynamic auction listings and real-time state updates.
- Built a live-bidding system using Supabase Realtime to broadcast instant database updates.
- Used pgCron jobs for auction state management and table publications for real-time updates
- Used React Query to avoid repeated backend calls by caching auction data and automatically syncing updates, so new bids were reflected instantly in the UI.

RideMates | *Carpooling App*

- **Tech Stack:** React.js, Node.js, mongoDB, Firebase
- Developed a full-stack carpooling platform with user authentication, ride creation and booking.
- Optimized frontend using React to improve performance and user experience
- Implemented location-based filtering logic to match users with nearby rides.

Bank Transaction Categorizer | *Learning Project*

- **Tech Stack:** Python, Pandas
- Used Python and Pandas to build a tool that reads bank statements and groups transactions into categories like Food, Travel, and Utilities
- Applied data wrangling techniques while using core data science concepts like data cleaning, pattern recognition, and simple classification logic.
- Implemented a CSV Parser to read a bank statement and analyze it.
